

The "Chocolates" App

Steps:

1. Create a Struct called "Chocolate". It should have three properties. Name, flag, price of chocolate
2. Add a table view in a view controller
3. Embed this view controller in navigation controller
4. Create a collection of "Chocolate" in this view controller
5. Table view should list all these chocolates with its name and flag left hand side and price to the right hand side
6. When user selects the chocolate, total price should be updated on the right hand side.
